Mangaluru, India • +919108617924 • bhatjeevu06@gmail.com • [LinkedIn](#) • [Portfolio](#) • [GitHub](#)

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL
Frontend: React, Vite, Webpack, HTML/CSS, TanStack Query, Jest
Backend: Node.js, Fastify, Express, REST APIs, BullMQ, Prisma
Databases: PostgreSQL (pgvector), Redis, Elasticsearch, Supabase
AI & ML: RAG, Prompt Engineering, Hugging Face
Cloud & Tools: AWS (Cognito, S3), GitHub Actions, CI/CD, Docker, Git, JWT
CS Fundamentals: OOP, Data Structures & Algorithms, Operating Systems

EXPERIENCE

Louisa AI (Goldman Sachs spin-off)

Software Engineer I

Remote
Jun 2024 - Present

- Owned the full authentication overhaul: migrated from Frontegg to AWS Cognito, implementing JWT-based flows, email/password login, SSO, and passkey support, eliminating vendor licensing costs; integrated Cookiebot in parallel to bring the app into compliance with client cookie consent requirements.
- Led the Webpack-to-Vite migration: reduced local build time from 38s to 15s (60% faster) and HMR from 2,719ms to 13ms (99% faster); improved JS chunk splitting from 5 to ~88 output chunks.
- Executed React 17 to 18 upgrade alongside concurrent package migrations with zero production regressions; initiated decoupling of the component library into a standalone npm package to reduce bundle weight and improve long-term maintainability.
- Built and shipped features within the network pod: contributed to Overlaps (UI and AI prompt engineering), a high-impact revenue-generating feature that detects warm relationship paths between users and prospects via AI-classified professional profiles; built the introduction request flow that acts on these connections enabling users to request introductions directly through the platform; and worked on second-degree connection features for finding colleagues across shared companies.

Louisa AI (Goldman Sachs spin-off)

Software Engineering Intern

Remote
Jan 2024 - Jun 2024

- Built a news intelligence pipeline ingesting articles via the Crunchbase API, scraping full content using newspaper4k, and running them through a multi-model NLP chain: headline classification, KeyBERT keyword extraction, and Facebook BART-large-CNN for summarization; orchestrated via Apache Airflow, stored in S3, and surfaced in the product UI.

PROJECTS

RecallAI | *Node.js · Fastify · TypeScript · PostgreSQL · pgvector · BullMQ · Redis · LangChain.js · Gemini · Supabase · React*

- Built an AI document ingestion pipeline (PDF, arXiv, plain text) with overlapping chunking, Gemini vector embeddings, and pgvector HNSW indexing. Async processing via BullMQ with exponential backoff so uploads never block the user.
- Implemented RAG Q&A with top-K cosine similarity retrieval and a LangChain.js flashcard agent generating four card types with vector-based duplicate detection; spaced repetition scheduling via the SM-2 algorithm.

MF Intel - Autonomous Fund Signal System | *Node.js · TypeScript · PostgreSQL · Prisma · Groq (Llama 3.3-70b) · Tavily · React · Vite · GitHub Actions*

- Built a weighted NAV movement estimator using live Yahoo Finance prices and AMFI holdings data; achieved average MAE of 0.46%-0.80% across 27 trading days, with best predictions within 0.036% of actual NAV change.
- Designed an agentic research pipeline (Tavily + Groq) that fetches real-time stock and macro news, classifies outlook as temporary or structural, and generates a daily investment signal email factoring in Nifty 50, Sensex, and 5-day cumulative movement; fully automated via GitHub Actions with idempotent NAV ingestion.

EDUCATION

NMAMIT Nitte
B.E. in Computer Science and Engineering

Mangaluru, India
2020 - 2024
