SUMMARY

Software Engineer with 2+ years of production experience at Louisa AI, a Goldman Sachs spin-off, owning features end to end from architecture through deployment, spanning authentication infrastructure, build tooling, and product features, not scoped to a single team. Led a Webpack-to-Vite build optimization that cut local build time 60% and HMR latency 99%, and owned an AWS Cognito authentication overhaul from design through rollout. Builds full-stack AI systems independently outside of work, including a RAG-based flashcard platform and an autonomous LLM research pipeline, and works comfortably in agile, cross-functional teams.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, C++, SQL

Frontend: React, Vite, Webpack, HTML5, CSS3, Tailwind CSS, Material UI

Backend: Node.js, Fastify, Express, REST APIs, GraphQL, FastAPI, Spring Boot, BullMQ, Prisma

Databases: PostgreSQL (pgvector), MongoDB, Redis, Elasticsearch, Supabase

AI & ML: RAG (Retrieval-Augmented Generation), Prompt Engineering, Hugging Face, GitHub Copilot, Claude

Testing: Unit Testing (Jest, JUnit)

DevOps & Cloud: AWS (Cognito, Lambda, S3), Docker, GitHub Actions, CI/CD, Git, JWT, OAuth, Swagger

Practices: Data Structures & Algorithms (DSA), Design Patterns, OOP, SDLC (Software Development Life Cycle), Operating Systems, Agile, Microservices

EXPERIENCE

Louisa AI (Goldman Sachs spin-off)

Remote

Software Engineer I

Jun 2024 - Jun 2026

- Owned the end-to-end migration from Frontegg to AWS Cognito, building JWT-based login, SSO, and passkey flows in-house to fully retire the paid vendor, and integrated Cookiebot in parallel to bring the app into compliance with client cookie consent requirements.
- Led a Webpack-to-Vite migration, cutting local build time 60% (38s to 15s) and Hot Module Replacement latency 99% (2,719ms to 13ms), while improving JS chunk splitting from 5 to about 88 output chunks.
- Built the UI and AI prompt engineering for Overlaps, a feature clients actively requested and prospects consistently called out during demos, and shipped an introduction-request flow enabling direct in-platform connections.
- Delivered second-degree connection detection to surface shared-company colleagues, plus responsive UI improvements for a consistent desktop and mobile experience.
- Upgraded React 17 to 18 with concurrent package migrations and zero production regressions; decoupled the component library into a standalone npm package and built a unified VideoPlayer supporting Brightcove, YouTube, Vimeo, and Dailymotion.

Louisa AI (Goldman Sachs spin-off)

Remote

Software Engineering Intern

Jan 2024 - Jun 2024

- Built a news intelligence pipeline (Python) processing 5,000+ articles a day: ingesting via the Crunchbase API, extracting full text with newspaper4k, and classifying and summarizing through a multi-model NLP chain (KeyBERT, BART-large-CNN); orchestrated via Airflow and surfaced in the product UI.

PROJECTS

RecallAI

Node.js · Fastify · TypeScript · PostgreSQL · pgvector · BullMQ · Redis · LangChain.js · Gemini · Supabase · React

- Built an AI document ingestion pipeline (PDF, arXiv, plain text) with overlapping chunking, Gemini embeddings, and pgvector HNSW indexing, processed asynchronously via BullMQ with exponential backoff to keep uploads non-blocking.
- Implemented RAG-based Q&A via pgvector HNSW similarity search and a LangChain.js pipeline that generates four flashcard types per chunk with duplicate detection, scheduling reviews with the SM-2 spaced-repetition algorithm.

MF Intel - Autonomous Fund Signal System

Node.js · TypeScript · PostgreSQL · Prisma · Groq (Llama 3.3-70b) · Tavily · React · Vite · GitHub Actions

- Built a weighted NAV (Net Asset Value) movement estimator combining live Yahoo Finance prices with AMFI holdings data, achieving 0.46%-0.80% average MAE (Mean Absolute Error) across 27 trading days and best-case predictions within 0.036% of actual change.
- Built a multi-step AI research pipeline (Tavily + Groq) that classifies stock and sector outlooks, synthesizes macro and stock-level news into a daily investment-signal email, and automates end-to-end execution via GitHub Actions.

EDUCATION

NMAMIT Nitte

B.E. in Computer Science and Engineering

Udupi, India

2020 - 2024
