

Jeevottam Bhat

Mangaluru, India • +919108617924 • bhatjeevu06@gmail.com • [LinkedIn](#) • [Portfolio](#) • [GitHub](#)

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL, Java, Python

Frontend: React, Vite, Webpack, HTML5/CSS3, Tailwind CSS, Material UI, Jest

Backend: Node.js, Fastify, Express, REST APIs, FastAPI, Spring Boot, JUnit, BullMQ, Prisma

Databases: PostgreSQL (pgvector), Redis, Elasticsearch, Supabase

AI & ML: RAG, Prompt Engineering, Hugging Face, Claude, GitHub Copilot

Cloud & Tools: AWS (Cognito, Lambda, S3), GitHub Actions, CI/CD, Docker, Git, JWT, OAuth, Swagger

CS Fundamentals: OOP, Design Patterns, DSA, SDLC, Operating Systems, Agile, Microservices

EXPERIENCE

Louisa AI (Goldman Sachs spin-off)

Software Engineer I

Remote

Jun 2024 - Jun 2026

- Owned the full authentication overhaul: migrated from Frontegg to AWS Cognito, implementing JWT-based flows, email/password login, SSO, and passkey support, eliminating vendor licensing costs; integrated Cookiebot in parallel to bring the app into compliance with client cookie consent requirements.
- Built and shipped features within the network pod: contributed to Overlaps (UI and AI prompt engineering), a high-impact, revenue-generating feature detecting warm relationship paths; built the introduction request flow enabling direct platform connections; and developed second-degree connection features for identifying colleagues across shared companies.
- Executed React 17 to 18 upgrade alongside concurrent package migrations with zero production regressions. Initiated decoupling of the component library into a standalone npm package, improving bundle weight and long-term maintainability. Built a unified VideoPlayer component supporting Brightcove, YouTube, Vimeo, and Dailymotion with platform-specific rendering, thumbnail fallbacks, and cookie consent gating.
- Led the Webpack-to-Vite migration: reduced local build time from 38s to 15s (60% faster) and HMR from 2,719ms to 13ms (99% faster); improved JS chunk splitting from 5 to ~88 output chunks.

Louisa AI (Goldman Sachs spin-off)

Software Engineering Intern

Remote

Jan 2024 - Jun 2024

- Built a news intelligence pipeline ingesting articles via the Crunchbase API, scraping full content using newspaper4k, and running them through a multi-model NLP chain: headline classification, KeyBERT keyword extraction, and Facebook BART-large-CNN for summarization; orchestrated via Apache Airflow, stored in S3, and surfaced in the product UI.

PROJECTS

RecallAI | [Node.js](#) · [Fastify](#) · [TypeScript](#) · [PostgreSQL](#) · [pgvector](#) · [BullMQ](#) · [Redis](#) · [LangChain.js](#) · [Gemini](#) · [Supabase](#) · [React](#)

- Built an AI document ingestion pipeline (PDF, arXiv, plain text) with overlapping chunking, Gemini vector embeddings, and pgvector HNSW indexing. Async processing via BullMQ with exponential backoff so uploads never block the user.
- Implemented RAG Q&A via pgvector HNSW similarity search; built a LangChain.js processing chain generating four flashcard types per chunk with duplicate detection; scheduled reviews via SM-2.

MF Intel - Autonomous Fund Signal System | [Node.js](#) · [TypeScript](#) · [PostgreSQL](#) · [Prisma](#) · [Groq \(Llama 3.3-70b\)](#) ·

[Tavily](#) · [React](#) · [Vite](#) · [GitHub Actions](#)

- Built a weighted NAV movement estimator using live Yahoo Finance prices and AMFI holdings data; achieved average MAE of 0.46%-0.80% across 27 trading days, with best predictions within 0.036% of actual NAV change.
- Built a multi-step AI research pipeline (Tavily + Groq) that classifies stock dragger outlooks, synthesizes macro and stock-level news into a daily investment signal email, and automates end-to-end execution via GitHub Actions.

EDUCATION

NMAMIT Nitte

B.E. in Computer Science and Engineering

Udupi, India

2020 - 2024
